

## Reference project

### Development of a vial filling facility

A customer is investing in a pioneering technology and developing a vial filling machine for highly toxic pharmaceutical products using insulator technology. Within a tight time frame, new design solutions have to be developed which satisfy the highest demands. In addition, international suppliers have to be supported.

---

#### Implementation

EXCO is commissioned with the project support and temporary project management.

- Detailed planning and supplier support
  - Mock up
  - Design support, space management, optimization of various components
  - Documentation: Project handbook, process description; functional design specifications and creation of specifications
-

Exco has helped us to bridge internal bottlenecks resulting from several parallel projects.

Dr. Norbert Kübler, Project Management, Client
